

# NTRL — Admin UI Wireframes

## Screens & Interaction States (v1.2)

Production System · Conceptual Wireframes (Non-Visual)

### 1. Purpose

This document defines the canonical Admin UI wireframes for NTRL.

It specifies screens, layout structure, and interaction states needed to manage feed categories, domain mappings, and categorization review.

### 2. Admin Navigation Structure

Admins access configuration via a dedicated Admin surface.

|                         |
|-------------------------|
| Admin Home              |
| — Feed Categories       |
| — Domain Mapping        |
| — Review Queue          |
| — Overrides & Audit Log |
| — Taxonomy Versions     |

### 3. Screen: Feed Categories

Primary screen for managing user-visible feed categories.

|                  |
|------------------|
| Feed Categories  |
| ■ World   ■      |
| ■ United States  |
| ■ Local          |
| ■ Business       |
| ■ Technology     |
| ■ Sports         |
| ■ Culture        |
| [ Add Category ] |

Interactions: toggle enable/disable, drag to reorder, add category.

### 4. Screen: Domain → Category Mapping

Defines how internal domains map to feed categories.

| Internal Domain              | Feed Category |
|------------------------------|---------------|
| Global Affairs               | World         |
| Governance (US)              | United States |
| Crime & Public Safety (City) | Local         |
| Finance & Markets            | Business      |
| Technology                   | Technology    |
| Science & Research           | Science       |

Interactions: dropdown change, validation warnings, save with version bump.

## 5. Screen: Categorization Review Queue

Displays articles requiring admin review.

| Story                        | Current Category | Confidence | Action |
|------------------------------|------------------|------------|--------|
| Court ruling on data privacy | Technology       | 0.54       | Review |
| Local factory explosion      | Business         | 0.61       | Review |

## 6. Screen: Review Detail

Used to inspect and override a specific article's categorization.

|   |
|---|
| Story Summary                                       |
| Detected Domain: Law & Justice                      |
| Mapped Category: Technology                         |
| Confidence: 0.54                                    |
| Explanation: Court ruling regulating tech companies |
| Override Category: [ United States ▼ ]              |
| Override Domain: [ Law & Justice ▼ ]                |
| Reason (required): _____                            |
| [ Approve ] [ Override & Save ]                     |

## 7. Screen: Overrides & Audit Log

Immutable log of all admin overrides and taxonomy changes.

| Timestamp  | Admin      | Change            | Reason             |
|------------|------------|-------------------|--------------------|
| 2026-01-27 | admin@ntrl | Category override | Legal ruling scope |

## 8. Interaction States (All Screens)

Idle: default view.

Hover/Focus: subtle outline only.

Disabled: muted text, no interaction.

Validation error: inline text, no color alarm.

Save success: silent persistence, no toast.

## 9. Design Outcomes

Admin UI reinforces discipline, traceability, and calm operation.

No action encourages speed, urgency, or volume.
